

# Digital Construction Leaders to Gather in Berlin

On 27 and 28 February, the annual Digital Construction Summit will take place in Berlin, returning to the German capital for its third edition. This time, the focus will be on modern technologies in digital construction, the application of AR and VR, BIM/VDC technology, digital twin and simulation technology, big data in construction and design & information management.

The [summit](#) will bring together experts in the field of virtual design and construction, construction management, construction IoT, virtual project delivery, and simulation technology. Attendants will gain relevant knowledge from industry leading experts on recent technology advances and challenges faced in complex construction projects and digitization of the construction industry.

Among the keynote speakers are David Philp, global BIM consultancy director at [AECOM](#), and Ilka May, CEO and partner at [LocLab Consulting](#).

The event can best be described as an excellent two-day opportunity to network with industry leaders and discuss all of the latest digital construction advancements and developments. The brochure [can be requested here](#).
